

ITT

Aerospace Controls

Linear Actuators

Features

- Permanent magnet motors
- Machine screw drive
- Force limiting capability
- High reliability
- Meets MIL-A-8064 requirements
- Non-jamming mechanical stops
- Integral electromechanical brake optional

ITT Aerospace Controls offers a wide range of electromechanical linear actuators to satisfy specific and demanding applications.

Utilizing machine screw drive systems and long life permanent magnet motors, a wide range of static and dynamic load/speed requirements can be accommodated.

Basic features include non-jamming mechanical stops, fixed or adjustable electrical limits and switched or continuous position feedback provisions. Optional features include load limiting, EM/EMC provisions and electromechanical braking. All components are housed within an environmentally sealed aluminum enclosure.

Engineered for life
